

KiWear Ring — true-scale sizer

Print at 100% — turn off “fit to page”. Check the scale bar below: it should measure exactly 50 mm before you start.

Option 1 • Match a ring you own

Lay a ring that fits that finger over the circles. The circle that frames the inside edge is your size. Don’t use jewellery bands, open rings or wide statement rings — their fit isn’t equivalent.

US 5 • 15.7 mm

US 6 • 16.5 mm

US 7 • 17.3 mm

US 8 • 18.2 mm

US 9 • 18.9 mm

US 10 • 19.8 mm

US 11 • 20.5 mm

US 12 • 21.4 mm

US 13 • 22.2 mm

US 14 • 23.0 mm

US 15 • 23.8 mm

Option 2 • Wrap the strip around your finger

Cut along the strip below. Wrap it around the base of your finger — snug, not tight — starting from the 0 edge, and read the size where the strip overlaps. If your knuckle is wider than your finger base, wrap the knuckle instead and use that size.

Measure in the evening, 6–9pm — fingers sit at their natural daily peak. Re-check the next morning.

Keep your arm relaxed at your side and your hand loose; measure the exact finger you'll wear it on.

Whole US sizes only. Land between two marks? Always take the larger size.

The right fit clears your knuckle, sits steady through your day, and leaves no mark after two hours.
